SECURE FULL MARKS IN IQ QUESTIONS

St. Xavier's | Ktm Metro Schlorship | KMC | Global | Trinity | Sainik | Prasadi

First Understand the Types of IQ Questions

Most entrance exams include a few common categories. If you master these, you can solve most IQ questions.

Common IQ Question Types

1. **Number series**
   Example: 3, 6, 9, 12, __ → **15** (pattern: +3)
2. **Alphabet series**
   Example: A, C, E, G, __ → **I** (skip one letter each time)
3. **Odd one out**
   Example: Apple, Mango, Banana, Car → **Car** (others are fruits)
4. **Analogy**
   Example: Bird : Fly :: Fish : **Swim**
5. **Coding–decoding**
   Example: CAT → DBU (each letter +1)
6. **Direction sense**
   Example: Ram walks north then turns right. Which direction now? → **East**
7. **Blood relations**
   Example: A is B's mother. B is C's brother. What is A to C? → **Mother**

8. **Venn diagram**
   Example: Students who like football and cricket → **overlapping circles**
9. **Logical reasoning**
   Example: All cats are animals. Tom is a cat. → **Tom is an animal**
10. **Pattern and figure reasoning**
    Example: ▲ ■ ▲ ■ ▲ _ → ■ (repeating pattern)

First learn **how each type works**.

Learn the Basic Patterns

Most IQ questions follow hidden patterns.

Example (number series):

2, 4, 8, 16, ?

Pattern:
×2 each time

Answer:
32

Another example:

3, 6, 9, 12, ?

Pattern:
+3

Answer:
15

Train your brain to quickly identify **addition, subtraction, multiplication, squares, cubes, or alternating patterns**.

Practice Small but Daily

IQ improves like a **muscle**.

Best rule:

- Solve **10–15 IQ questions daily**

- Spend **15 minutes only**
- Focus on **speed + accuracy**

Consistency matters more than studying many hours once.

Use the Elimination Technique

Many IQ questions are **multiple choice**.

Instead of finding the exact answer immediately:

1. Remove clearly wrong options
2. Compare remaining choices
3. Choose the most logical one

This saves **a lot of time in exams**.

Train Your Brain with Timed Practice

Entrance exams test **speed**.

Practice like this:

- Set a **15 minute timer**
- Solve **20 questions**
- Check answers

Gradually your brain becomes **faster at pattern recognition**.

Analyze Your Mistakes

After practice ask:

- Did I misunderstand the pattern?
- Was it a calculation mistake?
- Did I rush too fast?

Write difficult questions in a **mistake notebook**.

Reviewing these improves performance quickly.

Master Short Tricks

Many IQ questions have **quick tricks**.

Examples:

- Look for **alternating patterns**
- Check **difference between numbers**
- Check **square or cube relationships**
- Check **position in alphabet**

Example:

CAT = 3 + 1 + 20

These tricks help solve questions **very quickly**.

Solve Past Entrance Questions

This is **one of the best methods**.

Why?

Entrance exams often repeat:

- question patterns
- logic styles
- difficulty level

Practice at least **5–10 years of previous questions**.

Train Visual Intelligence

For **figure reasoning**, practice:

- mirror images
- paper folding

- pattern completion
- cube counting

These improve **visual thinking ability**.

Stay Calm During the Exam

In IQ tests:

- do **easy questions first**
- skip confusing ones
- return later

Spending too much time on one question can reduce your total score.
